Molded Grating

Molded gratings provide the ultimate in reliable performance, even in the most demanding corrosive conditions. Available in many panel sizes and slip resistant surfaces. Molded grating is recommended when corrosion and safety are concerns, or several grating penetrations are required. Ideal for catwalks, flooring, platforms, trench covers, screens, and media support.

Pultruded Grating

The 65% glass to 35% resin ratio of pultruded grating provides twice the stiffness of molded grating, allowing it to span greater distances. Pultruded grating is best suited to pedestrian walkways, platforms, and other applications where wide support spans, close load bar spacing, or ADA compliance is required. Available in a variety of panel sizes, depths, tie bar spacing and open area.

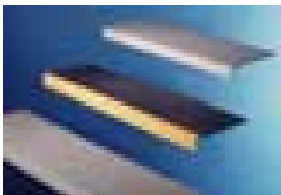

Handrail

Easily assembled from durable prefabricated modular components or custom engineered solutions specifically for your application.

Ladders

Ladder systems are easily assembled on site with ladder and cage components that meet or exceed OSHA requirements. Ladder rungs include heavily serrated flutes for positive, slip resistant footholds.

Stair Tread Solutions

A variety of slip resistant offerings for maintenance or new construction of stairways. Industrial stair tread panels are available in high performance resin formulations. They are a convenient way to provide solid, slip resistant footing for existing wood, concrete, or metal steps.

Accessories

Clips, grating legs, and rubber feet to complement the full line of FRP products. Clips are specially-designed to fasten grating panels together and to secure them to support structures. Grating legs are available to provide sturdy support of square mesh molded grating for elevated flooring applications. Grating rubber feet raise molded grating out of fluids or chips on the floor.
